

# ARTIFICIAL INTELLIGENCE GUIDELINES SUMMARY

These guidelines provide a framework for ethical and responsible use of artificial intelligence (AI) in the Clark County School District, prioritizing student and staff safety and data privacy.

The District's AI Guidelines aim to support the responsible and ethical use of artificial intelligence by students, teachers, and staff, focusing on key areas such as ethical use, data protection, legal obligations, and copyright considerations.

## 1. Ethical Use

AI tools should be used to support learning and enhance education, not replace teachers, and users should verify AI outputs to ensure accuracy and alignment with educational goals.

## 2. Data Privacy

Protect student and staff information by not sharing sensitive data with AI tools, using generalized data instead, and utilizing District-approved platforms while adhering to their privacy policies.

## 3. Legal Compliance

AI use must comply with laws and regulations such as FERPA, COPPA, CIPA, HIPAA, and Nevada Revised Statutes, as well as District policies, to ensure the privacy and security of student data.

## 4. Copyrighted Material

To avoid copyright infringement, do not enter or upload copyrighted materials into AI prompts; instead, paraphrase or provide relevant details like the subject, topic, and learning objectives.
